

Why should XM provide Instant Traffic & Weather in the first place? I have yet to find any community in the US that isn't served well by local over-the-air broadcasters. I believe my local broadcasters can do a much better job of providing this type of information than XM. When severe weather threatens my community I won't be listening to XM ... I'll be tuned to my local radio station thats served by area for years! I'm in favor of HR 4026
